Designed for the architectural lighting industry, the **Virgolite™ LED modules** are part of the **HEICO lighting™ Contactless LED System**. For fast and easy installation the LED modules are inserted on one electrical conductor connected to the LED Master Power Supply (LMPS). The AC power of the LMPS is fed by electromagnetic induction to the LED module, which eliminates electrical contacts and risks of corrosion.

The **LS2, LS3, LS4, LS6 and XS modules** are available in white at 3000K, 3500K and 6500K. They are entirely encapsulated and suitable for use in dry, damp and wet applications (suitable for wet locations when used with power supply model LMPS-350).

The **X and XS modules** are available in amber, blue, green and red. They are entirely encapsulated and suitable for use in dry, damp and wet applications (suitable for wet locations when used with power supply model LMPS-350).

The **LS1 module** is available in white (6500K). It has a conformal coating and is suitable for use in dry and damp applications. The LS1 module is clipped on the electrical conductor.
